Endocrine produces hormones -

Adrenaline - Insulin - Normal glucose level.  
Glycogenesis - formation of - glycogen stored  
form of glucose - glycolysis - Cells have

The cells needs sugar -

The glucose in the blood increases, the  
brain tells the pancreas to produce insulin -  
The insulin binds the cells by receptors act as  
a permission to allow the glucose to get inside.  
the cells #

Transport proteins that requires a precursor
